Second Stage In-Line Adjusting Tool

ZEE GRAVITY 2nd Stage In-Line Adjustment Tool is designed for precise fine-tuning of regulator second stages equipped with adjustable air inlet orifices. The tool features an integrated pressure gauge, allowing quick and accurate monitoring of first stage intermediate pressure (IP) during servicing.

Intermediate pressure gauge

Ideal for field diagnostics, this tool connects directly to any standard BCD low-pressure inflator hose. It features a durable brass internal mechanism housed in a lightweight body, with a chrome-plated brass nipple. The integrated gauge includes clearly graduated scales in both imperial (10 psi increments) and metric units (0.5 kg/cm² increments) for accurate readings.

Siliucone Grease

This silicone grease is perfect for lubrication and for forming a waterproof, non-reactive barrier that shields O-rings, gaskets, and other rubber or plastic components from drying out, cracking, or sticking.

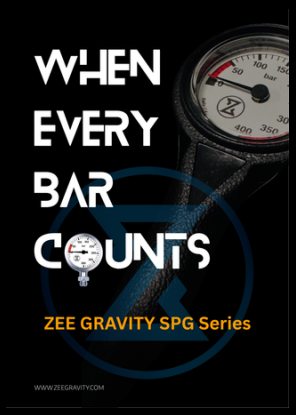

2 Available Size: 40g - 80 g
